

New Winter Fan Cover

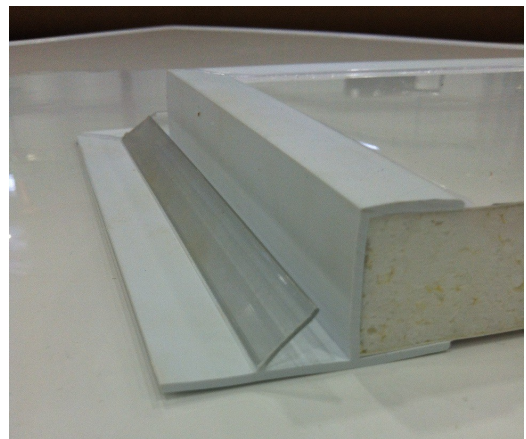

by RAC Industries, LLC

Leaky fan shutters can wreak havoc on your heating budget. Fans need to work harder to overcome leaked air and still maintain negative pressure needed for proper air distribution. That means extra cold air is pumped into barns, heated, and exhausted.

Cover unused fans with our sealed winter covers to eliminate unnecessary heating expense.

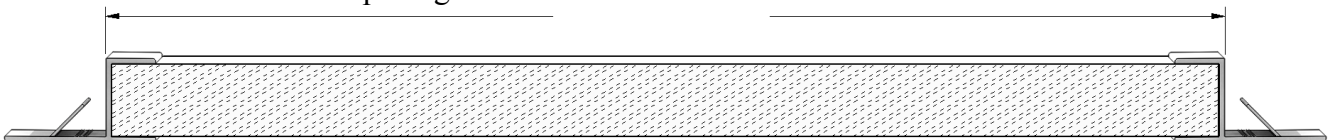

Winter covers feature a 1" foam with PVC skin, wrapped in a tough PVC trim.

A flexible PVC seal eliminates costly air leaks.

Covers are custom-built to size. **

**Measure fan shutter opening. Winter cover will be built to measurement as illustrated below.
